A conference about the socio-economic impact that epidemics and pandemics may have will be held in Milan, October 27, with the collaboration of ASSET project. The event was inspired by the recent Ebola outbreak in West Africa, which brought significant consequences on the economic and social structures of the three countries involved by the epidemic.

In fact, social and economic issues may be triggered not only by the disease itself, but also by actions taken by supranational organization in order to fight it. Many questions arose about the policies to be adopted in similar cases and, most of all, about the undeniable conflict between individual habits and community needs.

During the conference, participants will discuss such a topic in a historical perspective, in order to draw relevant lessons from previous, similar events, like the SARS epidemic in 2003.

Programme

Apertura dei lavori

Gianluca Vago, *Dean of the University of Milan*
